

KraftTop means being in touch every day

Every day has 86,400 seconds. For us, these are 86,400 opportunities to touch the lives of millions. Our KraftTop grades can serve multiple applications such as food & beverage packaging, industrial packaging and heavy duty packaging. And why not the sustainable furniture of the future? At Mondi we create brilliant packaging and paper solutions that help our customers succeed. And help their customers live their lives.

KraftTop means Green Containerboard

Mondi's Green Containerboard initiative is all about protecting the environment and promoting environmentally sound purchasing. All KraftTop papers carry a green classification that shows at a glance to which environmental standard each paper grade conforms. All grades are certified to EN 13432 as biodegradable materials, and the fibre is sourced from sustainably managed forests. KraftTop grades also conserve resources: they have a recycled fibre content of more than 50 per cent.

Your benefits

- Resource efficiency, because of the conversion of recycled fibres
- Natural colour, thanks to virgin fibre in the top layer
- Sufficient strength parameters for kraftliner applications
- Powerful tensile stiffness parameters support functional packaging
- Cost effectiveness
- Integrated supplier

FORWARD-LOOKING STATEMENTS DISCLAIMER

This document includes forward-looking statements. All statements other than statements of historical facts included herein, including, without limitation, those regarding Mondi's financial position, business strategy, market growth and developments, expectations of growth and profitability and plans and objectives of management for future operations, are forward-looking statements. Forward-looking statements are sometimes identified by the use of forward-looking terminology such as 'believe', 'expects', 'may', 'will', 'could', 'should', 'shall', 'risk', 'intends', 'estimates', 'aims', 'plans', 'predicts', 'continues', 'assumes', 'positioned' or 'anticipates' or the negative thereof, other variations thereon or comparable terminology. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Mondi, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Such forward-looking statements and other statements contained in this document regarding matters that are not historical facts involve predictions and are based on numerous assumptions regarding Mondi's present and future business strategies and the environment in which Mondi will operate in the future. These forward-looking statements speak only as of the date on which they are made.

No assurance can be given that such future results will be achieved; various factors could cause actual future results, performance or events to differ materially from those described in these statements. Such factors include in particular but without any limitation: (1) operating factors, such as continued success of manufacturing activities and the achievement of efficiencies therein, continued success of product development plans and targets, changes in the degree of protection created by Mondi's patents and other intellectual property rights and the availability of capital on acceptable terms; (2) industry conditions, such as strength of product demand, intensity of competition, prevailing and future global market prices for Mondi's products and raw materials and the pricing pressures thereto, financial condition of the customers, suppliers and the competitors of Mondi and potential introduction of competing products and technologies by competitors; and (3) general economic conditions, such as rates of economic growth in Mondi's principal geographical markets or fluctuations of exchange rates and interest rates.

MONDI EXPRESSLY DISCLAIMS

- a) any warranty or liability as to accuracy or completeness of the information provided herein; and
- b) any obligation or undertaking to review or confirm analysts' expectations or estimates or to update any forward-looking statements to reflect any change in Mondi's expectations or any events that occur or circumstances that arise after the date of making any forward-looking statements, unless required to do so by applicable law or any regulatory body applicable to Mondi, including the JSE Limited and the LSE.

Strength on which you can depend

Whenever you need strong, reliable and cost-efficient packaging, KraftTop grades deliver top results

KraftTop means two layers

Mondi Containerboard offers a comprehensive choice of strong KraftTop liners for sophisticated applications. They consist of two layers: the top layer is made of 100% virgin fibre, while the bottom layer contains some recycled fibre. They therefore combine the characteristics of kraftliners and fully recycled liners. Since the top sheet consists of virgin fibre, KraftTop grades have a natural appearance and stronger technical parameters than fully recycled liners or testliners. KraftTop grades are a valid and cost-effective alternative to kraftliners.

KraftTop means strength

Offering higher tensile stiffness than recycled liners, KraftTop grades enable converters to produce stronger and more functional packaging materials. When corrugated packaging materials with a high flute profile are produced from lightweight recycled liners, for example, interflute liner buckling can occur. This gives rise to lower box compression strength (BCT) values than indicated by theoretical calculations. The outstanding strength that characterises KraftTop grades makes them ideally suited to the production of a wide range of packaging. All KraftTop liner variants have an excellent burst index for stronger packaging. In addition, all of the papers offer optimum runnability on corrugators.

KraftTop means good-looking

KraftTop containerboard grades have outstanding surfaces whose colour and formation are equivalent to those of kraftliners. They have a natural appearance and offer brilliant printability thanks to their superior smoothness characteristics. They are therefore the perfect choice for packing luxury goods, such as electronics, cigarettes and tobacco, that will catch the eye on the shelf. Alongside decorative packaging, KraftTop grades are also suitable for packing food safely.

More than just standard kraftliners

KraftTop grades for good-looking and resource-efficient packaging

KraftTop means outstanding performance

The ultimate test of any packaging material is its performance. With our KraftTop range you are assured of optimum box and corrugated board strength at all times. Your packaging will stay intact and protect the contents, even in the most challenging conditions.

At Mondri, we are committed to delivering only the best, and the tensile stiffness and short span compression test (SCT) data of our KraftTop liner portfolio underline the papers' reliability. Both the cross direction (CD) and the machine direction (MD) tensile stiffness parameters of the KraftTop grades are excellent, proving their ability to convert into high-performance corrugated box solutions.
