

Easy open

Open your bags safely and cleanly

Fillers can now get one step ahead in making their customers' lives easier by considering how their bags will be opened. **Easy Open** makes opening any type of bag fast, safe and clean. You no longer need to worry about contaminating the filled goods and can avoid handling sharp tools.

An effective concept

The **Easy Open** concept features an integrated tear-open strip at the bottom of the bag. This allows the user to easily open the bag and quickly release the content. The strip is simply pulled as indicated on the bag and the two sides can now simply be parted to access the filling good.

Your key benefits:

- Quick and easy opening
- Clean handling of the contents
- No contamination
- Avoid accidents with sharp tools
- Customisable for all types of state-of-the-art bags

Avoid contamination

Easy Open prevents paper shreds and other particles, which could contaminate the filled goods when opening the bag with common tools, from entering the bag. This is especially important in the food, pharmaceutical and chemicals industries and is also an advantage for building materials. When combined, for example, with the Hot Lock Bag® – an open-mouth bag with hygienic hot melt – the **Easy Open** feature permits the quick and clean separation of the PE inliner from the protecting paper bag. The inner bag is therefore left undamaged and the filled goods remain pure until their final use.

Safety first

When opening the bag with a cutter knife or similar tool, several risks are present. Besides the risk of contaminating the filled goods, there is a very high risk that users may injure themselves. Using **Easy Open** means additional safety for production employees and end users. A definite plus for promoting safety.

Areas of application:

- Food, feed and seed
- Pharmaceuticals
- Chemicals and minerals
- Cement and other building materials

Available for

- Open-mouth bags
- Valve bags
- All sizes including Mini Bags
